PROJECTS

HCMatrix Time and Attendance: Built using HTML, Laravel, CSS and Javascript. A web based time and attendance management system that captures shifts and user attendance and fetches attendance data from a biometric device. It also captures attendance for spill over shifts (shifts that starts in the evening and ends the next day). It is deployed in hotels for their workers in various departments.

HCMatrix Payroll: Built using HTML, Laravel, CSS and Javascript. Web based payroll management application that calculates salary and compensation of staff using a salary structure based on their grade, their basic pay or a daily agreed gross pay to be paid at the end of the month.

HCMatrix Performance: Built using HTML, Laravel, CSS and Javascript. Web based Balance score card performance system. Employee 360 Review system with javascript powered aggregated reports based on Self, Manager, Peer and Subordiante reviews

HCMatrix: Built using HTML, Laravel, CSS and Javascript. A web based full HR Management solution that helps HR Managers manage their employees. It also has an employee self service where employees can book for leave, download payslip and other minute functionalities.

Palipro: Built using HTML, Laravel, CSS and Javascript. A web based contract management system that enables leagal departments create a contract that has been requested for by other departments in the organization. Contracts can be shared with vendors to review and approve till the final approval is made.

School Management System: Built Using HTML, PHP, CSS and Javascript. An end to end school management system that enables schools compute student results, record school fees payment and student information.

Church Management System: Built Using HTML, PHP, CSS and Javascript. Church Database system to record weekly collections and fund raising activities and capture pledge redemption.
